Standard of Assessment :

To judge if the library serves all neighborhoods fairly, I set a simple standard: since we have 5 neighborhoods, each one should ideally represent around **20%** of total members and checkouts.

A neighborhood is considered **under-represented** if its share of members and borrowings is far below this 20% mark, showing a clear gap in library access or awareness.

My Finding :

By analyzing [task2_cleaned_data.csv](#), here is how members and checkouts are distributed:

Neighborhood	Members Count	Members %	Checkouts Count	Checkouts %
Maadi	20	30.77%	114	28.22%
Nasr City	16	24.62%	101	25.00%
Heliopolis	13	20.00%	87	21.53%
Zamalek	11	16.92%	68	16.83%
Shubra	5	7.69%	34	8.42%

•

Conclusion: **Shubra is clearly under-represented.** It has only 5 members (7.69%) and 34 checkouts (8.42%), which is way lower than areas like Maadi (30.77%) or Nasr City (24.62%).

Key Insight: Interestingly, **Shubra's 5 members** averaged **6.8 checkouts per student**—higher than Maadi's 5.7! This shows that Shubra students love to read, but very few are actually registered.

The Reason :

The main reason for this gap is likely **distance and lack of local promotion and marketing during the Reading Kickoff event.** If event activities took place closer to East Cairo (like Nasr City or Heliopolis), students in Shubra faced transportation barriers and missed out on signing up.

A Next Step :

Next summer, the library should run a Mobile Library & Registration Drive in Shubra. Partnering with local schools , clubs to register students and drop off books directly will easily solve the distance issue and bring in more readers.
